

RIM door solutions

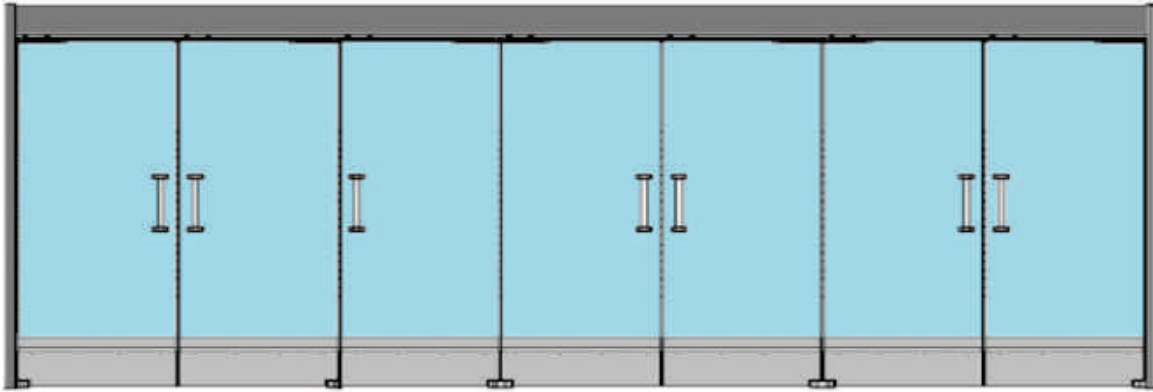

Safe Roll-In doors for refrigerated cabinets

Made from highest quality PET plastic

- Safe
- Light
- Transparent
- 100% Recyclable

DOOR TECH GROUP INTRODUCES NEW MULTI-DECK ROLL-IN-MILK DOOR-SYSTEMS. THEY ARE MADE OF ENERGY SAVING PET DOORS BY CLEAR VISION COOLING

Door Tech Group has further extended its range of retail cabinet door collection. We are launching new energy efficient PET -Door System for the multi-deck roll-in milk. There are three models available; all enabling safe loading with full visibility. Special custom-built design provides big energy savings.

In order to extend the shelf life of the stored milk, it is important to keep the entire supply chain of milk products at the required temperature. The roll-in milk cabinets are equipped with **highly safe Full-Protection-PET doors** from Clear Vision Cooling, ensuring optimal performance and minimizing energy consumption.

New door solutions are:

- Shockproof - No Glass Breakages
- Light Weight
- Energy Saving up to 40%
- Frameless Transparency
- Easy handling

With such a high stock turnover in the dairy aisle, it is important that milk cabinets can hold a large volume of products. At the same time, they need to provide both retailer and shopper easy access to the dairy items. The new RIM doors are highly resistant to hits from outside and during the maneuvering with trolleys inside while pulling them out. Lightweight doors and the soft-closing system provides easing handling and easy access for both the customer and service staff.

We are offering three models in the CVC new roll-in milk range. The first one is the FP version with full protection inside and outside. The other two models are high standard doors available with or without additional bumpers.

CVC RIM DOOR VERSIONS FOR ROLL IN MILK CABINETS

Many supermarkets all over the world are using Roll In cabinets to store milk in trolleys. The **Door Tech Group** company offers an extensive range of energy-efficient **PET** doors to keep your products cool, whilst maximizing the retail experience. Compared to widely used Glass doors, the PET doors ensure a **strong protection** against inside and outside impacts.

- Advantages:**
- Unbreakable in 99% cases
 - Frameless and fully transparent
 - Light weight for easy handling
 - Up to 40% energy saving
 - E-Flex LED Lighting available

CVC RIM door FP (Full Protection)

The FP version includes a metal plate inside and outside. With the highly developed robust bumper system offers maximum safety.

We include an additional bumper system inside the cabinet to prevent direct contact between trolley and the door.

CVC RIM door Standard FH (Full Height)

The Standard full height door system is mounted directly to the floor. The PET material offers, compared to glass, an extremely strong protection against breakage. The Retrofit package includes connection profiles, covering inside mechanism. With this solution the old cabinet will look like a new one, but with highly energy efficient integrated doors.

CVC RIM door Standard FH - "PLUS" (Full Height and Bumper system)

The Door Tech Group developed an additional security system, called "Standard-PLUS". This version is available with 2 different types of bumpers.

Light Bumper – LB

Metal protection angle element, mounted at the edge of the door in the cabinet:

- Single version at the end,
- Double version in the middle.

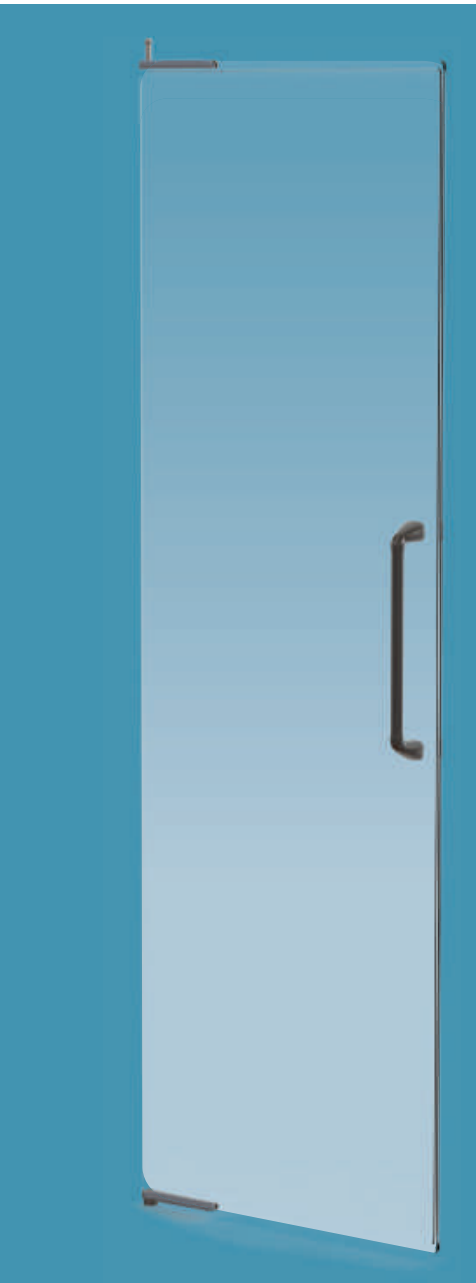

Strong Bumper – SB

Metal protection bumper is a robust version mounted in the floor, resistant to almost all impacts.
